Algebraic Curve

algebraic curve A curve is said to be algebraic when it's described by a polynomial Cartesian equation with real coefficients; a not algebraic curve is said to be transcendental . The degree (or sometimes the order) of a flat algebraic curve of equation $P (x, y) = 0$ is the degree of the polynomial P , supposed square-free.

Algebraic curve - Wikipedia

In algebraic geometry, a plane affine algebraic curve defined over a field k is the set of points of K^2 whose coordinates are zeros of some bivariate polynomial with coefficients in k , where K is some algebraically closed extension of k .

Algebraic curve - Encyclopedia of Mathematics

An algebraic variety of dimension one. An algebraic curve is the most frequently studied object in algebraic geometry. In the sequel, an algebraic curve means an irreducible algebraic curve over an algebraically closed field. For the line, i.e. any divisor of degree zero is a principal divisor.

Other topics include counting algebraic curves with tropical geometry, block triangular bilinear forms and braid group action, the topologicalization method in cluster algebras, and an application of the max-plus spectral theory to an ultradiscrete analogue of the Lax pair.

Plane real algebraic curve - Encyclopedia of Mathematics

If on the other hand is an irreducible polynomial, is called an irreducible curve. Two irreducible plane real algebraic curves, one of order m and the other of order n , intersect in at most mn points (Bezout's theorem).

Riemann Surfaces and Algebraic Curves JWR Tuesday December 11, 2001, 9:03 AM We describe the relation between algebraic curves and Riemann surfaces. An elementary reference for this material is [1]. 1 Riemann surfaces 1.1. A Riemann surface is a smooth complex manifold X (without bound-ary) of complex dimension one. Let $K \rightarrow X$ denote the canonical line bundle so that the fiber K_p over $p \in X$ is the
