Complex engineered systems are really composite entities made up of many different elements and subsystems, heterogeneous components that were never really designed to work together. The system is distributed out, no one is really in control, and the whole thing is really just a network of connections. Our city is the product of thousands or even millions of different actors, businesses.

Design of complex engineered systems has the incredible challenge of mitigating and minimizing the inevitable irrationality that is the hallmark of any activity involving multiple individuals or disciplines. It is impossible for any person or even group of people to understand and manage all the couplings that exist in such a system. Hence, the ability to make rational decisions in such an
