Desertification - Wikipedia

Desertification is a type of land degradation in which a relatively dry area of land becomes increasingly arid, typically losing its bodies of water as well as vegetation and wildlife . It is caused by a variety of factors, such as through climate change (particularly the current global warming) and through the overexploitation of soil through **United Nations Convention to Combat Desertification** Established in 1994, UNCCD is the sole legally binding international agreement linking environment and development to sustainable land management.

Desertification | Definition of Desertification by Merriam ...

Recent Examples on the Web. Roughly three-quarters of Mongolia's land is degraded or suffering desertification, with about a quarter seriously affected, said Damdin Dagvadorj, managing director of the Climate Change and Development Academy.

Oasis: What causes desertification?

What causes desertification? The immediate cause is the removal of vegetation. Unprotected, dry soil surfaces then blow away with the wind or are washed away by flash floods, leaving infertile lower soil layers that bake in the sun and become an unproductive hardpan. Overgrazing destroys valuable plant species, leaving mostly unpalatable ones.

Causes and Impacts of Land Degradation and Desertification ...

Abstract. Desertification, a phenomenon referring to land degradation in arid, semi-arid and dry sub-humid regions as a result of climatic variations and human activities, is considered as one of the most severe environmental and socio-economic problems of recent times.

Soil Erosion and Degradation | Threats | WWF

Without plant cover, erosion can occur and sweep the land into rivers. The agricultural plants that often replace the trees cannot hold onto the soil and many of these plants, such as coffee, cotton, palm oil, soybean and wheat, can actually worsen soil erosion.
