planar graphs, presuming the points are in general position and the drawing that we want is the standard one (with all points on the outer-face). Namely, any outer-planar graph can be embedded in any set of n points in general position so that the drawing is planar. On the other hand, for arbitrary planar graphs a point-set

1. Introduction. The unit-distance graph of $S \times R \times d$ is defined as the graph $G = (V, E)$, where $V = S$ and E is the set of all pairs of points $x, y \in S$ such that x and y are at distance 1. graphs A Personal blog

After awful battle and frustration driven anger I got the system and graphing finally done. Haven't had proper graphs since 10 years ago when we all had to have MRTG and we graphed every possible thing including temperatures where we lived.

Up-Embeddability of a Graph by Order and Girth | SpringerLink

Abstract. Let G be a connected graph of order n and girth g . If $d_G(u) + d_G(v) \leq n - 2g + 5$ for any two non-adjacent vertices u and v , then G is up-embeddable.

Surface Embeddability of Graphs via Reductions

Uploaded by RyanElias On the basis of reductions, polyhedral forms of Jordan axiom on closed curve in the plane are extended to establish characterizations for the surface embeddability of a graph.
