Background. An increasing number of long noncoding RNAs (lncRNAs) have been identified recently. Different from all the others that function in cis to regulate local gene expression, the newly identified HOTAIR is located between HoxC11 and HoxC12 in the human genome and regulates HoxD expression in multiple tissues.

1

In chapter four the theory of evolutionary biology and the mechanism of evolution and forces that create genetic variation in a population are introduced and briefly discussed.
