THE IMMUNE SYSTEM AND THE LIVER The liver is of key importance in removing noxious extraneous antigens through its reticuloendothelial network (Kupffer cells). Cells responsible for immune reactivity in the liver are: B lymphocytes, the clone progenitors of plasma cells which secrete immunoglobulins; and T lymphocytes which mediate cellular immunity, including delayed hypersensitivity.

Comprised of 33 chapters, this book begins with an introduction to the clinical, morphological, and virological aspects of liver disease. In particular, the clinical spectrum of autoimmune liver disease is considered, along with the pathology of chronic hepatitis. Morphological and immunological studies on chronic aggressive hepatitis and

primary biliary cirrhosis are presented. Subsequent

Autoimmune ...**

Autoimmune hepatitis (AIH) is a unique form of immune-mediated disease that attacks the liver through a variety of immune mechanisms. The outcomes of AIH are either acute liver disease, which can be fatal, or, more commonly, chronic progressive liver disease, which can lead to decompensated liver cirrhosis if left untreated.
