One membrane transport protein found in the cells of the liver functions to shuttle glucose between the liver and bloodstream, and is an example of a uniport transporter, for it moves only one solute. The direction of movement is passive, or with its concentration gradient.

Ion-Exchange Membranes - Hindawi

Principles of ion transport across ion-exchange membranes had been investigated using biological membranes in old time. Industrial application of the membranes started after the invention of artificial membranes in 1950. Ion-exchange membrane electro dialysis is now one of the basic technology in saline water desalination industry. It is also applied to many fields such as demineralization and
