A multi-agent based system with big data processing for ...

Purpose Decision support systems are becoming an indispensable tool for managing complex supply chains. The purpose of this paper is to develop a multi-agent-based supply chain management system that incorporates big data analytics that can exert autonomous corrective control actions. The effects of the system on supply chain agility are explored.

A Negotiation-Based Multi-Agent System for Supply Chain ...

A Negotiation-Based Multi-Agent System for Supply Chain Management. A supply chain is a key definition in logistics. The supply chain is a set of logistics system nodes that is linearly ordered by the material, information or financial flow in order to analyze or synthesize a specific set of logistic functions and (or) costs.

A negotiation-based Multi-agent System for Supply Chain ...

This paper describes an ongoing effort in developing a Multiagent System (MAS) for supply chain management.

In our framework, functional agents can join in, stay, or leave the system. The Supply
