[A Simplified Guide to Occupational Therapy for Strokes | Sacho](#)

The Benefits of Occupational Therapy: Improving quality of life. The primary benefit of occupational therapy is an improved quality of life. Occupational therapists help patients improve their sensory and motor abilities during the post-stroke recovery period so patients can relearn valuable skills, including grooming, using a computer, and cooking. With these skills, stroke survivors can return to normal life.

[Occupational therapy for stroke: what is it and how can it ...](#)

This review of occupational therapy for care home residents with stroke was able to include only one study involving 118 participants, comparing occupational therapy and standard care. The authors concluded that since it only included one study, the effectiveness of occupational therapy for the population of stroke survivors residing in care homes is not clear. This is another area where more research is clearly needed.
