Tensor - Wikipedia

This table shows important examples of tensors on vector spaces and tensor fields on manifolds. The tensors are classified according to their type (n, m) , where n is the number of contravariant indices, m is the number of covariant indices, and $n + m$ gives the total order of the tensor.

Tensor -- from Wolfram MathWorld

An n th-rank tensor in m -dimensional space is a mathematical object that has n indices and m^n components and obeys certain transformation rules. Each index of a tensor ranges over the number of dimensions of space. However, the dimension of the space is largely irrelevant in most tensor equations (with the notable exception of the contracted
