Lecture 9 Phase transitions.

Lecture 9 Phase transitions. 1 Introduction The study of phase transitions is at the very core of structural condensed-matter physics, to the point that one might consider all we have learned in the previous lectures as a mere preparation for the last one. The reason why the structural physicist has so much to offer here is that, in a large class of phase transitions, the system undergoes

The term phase transition (or phase change) is most commonly used to describe transitions between solid, liquid, and gaseous states of matter, as well as plasma in rare cases.

B-model Topological Strings and 2D Type 0A Strings ...

Abstract. We present the results for topological string amplitudes on the deformed Z_2 orbifolded conifold. The equivalence is shown explicitly between B-model topological strings on the deformed Z_2 orbifolded conifold and two dimensional type 0A strings at the radius $R = \sqrt{(\alpha)'^2}$
