Tuberculosis - Wikipedia

Tuberculosis may infect any part of the body, but most commonly occurs in the lungs (known as pulmonary tuberculosis). Extrapulmonary TB occurs when tuberculosis develops outside of the lungs, although extrapulmonary TB may coexist with pulmonary TB. [Tuberculosis \(TB\): Causes, Symptoms, Warning Signs ...](#)

Tuberculosis-- or TB, as it's commonly called -- is a contagious infection that usually attacks the lungs. It can also spread to other parts of the body, like the brain and spine.

Tuberculosis: Causes, symptoms, and treatments

Tuberculosis is an infectious disease that usually affects the lungs. Compared with other diseases caused by a single infectious agent, tuberculosis is the second biggest killer, globally.
